

AmclNode::AmclNode

AmclNode::runFromBag

AmclNode::globalLocalization  
Callback

```
graph LR; A[AmclNode::AmclNode] --> C[AmclNode::globalLocalization Callback]; B[AmclNode::runFromBag] --> C;
```

The diagram illustrates a dependency or registration process. Two white rectangular boxes on the left, labeled 'AmclNode::AmclNode' and 'AmclNode::runFromBag', have blue arrows pointing to a single gray rectangular box on the right labeled 'AmclNode::globalLocalization Callback'. This suggests that both the constructor and the 'runFromBag' method of the 'AmclNode' class are associated with or register a global localization callback.
